SAFETY INFORMATION

- STOP PRINTING BEFORE INSERTING OR REMOVING THE CARTRIDGE.
- TURN OFF PRINTER BEFORE PLUGGED / UN-PLUGGED ANY CABLE (PRINT HEAD CABLE / ENCODER CABLE / SENSOR CABLE / IO CABLE).
- BE CAREFUL OF USING OTHER EXTERNAL DEVICES SUCH AS: ENCODER / SENSOR / POWER SUPPLY.
- DO NOT TRY TO USE OTHER CARTRIDGES THAT IS NOT SUPPLIED FROM YOUR SUPPLIER.
- AVOID USING WITH HIGH VOLTAGE, STRONG IMPACT TO PRINTER.
- STORE THE PRINTER IN A DUST-FREE ENVIRONMENT.
- BE CAREFUL OF UPDATING FIRMWARE AND SOFTWARE.
- WORKING TEMPERATURE: 5-50°C.
- USE GLOVE TO AVOID THE SHARP FROM MOUNTING BRACKET.
- RECOMMEND USE MASK AND GLASSES TO AVOID THE INK FLY IN AIR.
- WARNING: THIS EQUIPMENT IS COMPLIANT WITH CLASS A OF CISPR 32 / EN 55032. IN A RESIDENTIAL ENVIRONMENT THIS EQUIPMENT MAY CAUSE RADIO INTERFERENCE.

EMERGENCY CASE

IN SOME SPECIAL CASE LIKE: APPEAR SMOKE ON PRINTER, PRINT OUT CONTINUOUSLY WITHOUT CONTROL, FIRE, EXPLOSIVE SOUND, ETC.

PLEASE REMOVE THE POWER SUPPLY IMMEDIATELY!

ENVIRONMENT PROTECTION

**DON'T THROW PRINTER /
INK CARTRIDGE TO
RECYCLE BIN**

PRODUCT WARRANTY

LIMITED WARRANTY. THE HOUSING AND CIRCUIT BOARD FOR EACH PRINTER IS WARRANTED TO BE FREE FROM DEFECTS IN MATERIALS AND WORKMANSHIP FOR A PERIOD OF TWELVE (12) MONTHS FROM THE BILL OF LADING DATE. THIS LIMITED WARRANTY DOES NOT APPLY TO SPARE PARTS, AUTHORIZED INKS, OR CARTRIDGES, OR TO HOUSINGS AND CIRCUIT BOARDS THAT EXPERIENCE PROBLEMS RESULTING FROM MISUSE, TAMPERING OR IMPROPER STORAGE.

- ANY NON-ORIGINAL PARTS AND UNAPPROVED OEM INKS ARE USED.
- THE PRODUCT HAS BEEN ALTERED OR MODIFIED WITHOUT APPROVAL FROM US.
- THERE IS DAMAGE ON THE PRINT HEAD AS A RESULT OF IMPROPER INSTALLATION.
- DAMAGE OCCURS FROM AN ACCIDENT, SUCH AS BUT NOT LIMITED TO, BEING DROPPED, BEING SPRAYED WITH WATER OR OTHER LIQUIDS, CAUSED BY A NATURAL DISASTER, CAUSED BY STOCKING OR SHIPPING CONDITIONS.
- UNAPPROVED, WRONG OR UNSTABLE POWER SUPPLY IS USED.

ABOUT MACHINE

Thank you for purchasing the **Smart-Jet DL200 Thermal Inkjet Coder**, a product of **MSSC LLC**. This printer is designed for **packaging printing, POD printing applications** powered by HP Thermal Inkjet Technology.

Machine boasts to be able to run **Standalone, print variable data and variable 2D barcodes**, Wi-Fi connection via mobile devices for control and real time update print status. Each option provides a full set of applications.

Machine produces crisp text, logos, variable data and barcodes on porous and non-porous media by automatically recognizes aqueous and solvent inks and applies the appropriate printing parameters.

The complete system includes one machine, power supply with On/Off switch, mounting brackets.

TECHNICAL SPECIFICATIONS

Machine details

No.	Description	Specifications
1	Model	Smart-Jet DL200
2	Display	PC's Monitoring, Mobile
3	Dimensions (LxWxH)	214 x 76 x 101.5 mm / 8.42 x 2.99 x 3.99 in
4	Weight	930g
5	Power supply	AC 100V – 240V, 50/60Hz. Output 24VDC 2.5A
6	Maximum power consumption	48W
7	Maximum printing resolution	600x600dpi
8	Print speed	70m/min @300x300dpi
9	Optical density	5 levels
10	Operation selection	Wi-Fi, LAN Internet (Cat 6 or higher)
11	Message memory	4GB for Storage
12	Ink solution	Aqueous and Solvent
13	Menu language	Multiple / selectable
14	Printable characters	Windows true fonts
15	No. of lines	Unlimited per Template
16	Character height	Maximum 25.4mm/1"
17	Printability	Alphanumeric, logos, date/time, expiry date, Julian date, shift code, variable data and variable 2Dbarcodes, POD (Print Online Data)
18	Operating temperature	5°C – 50°C
19	External connections	External sensor, encoder, alarm kit, etc...

Mobile Application

Control machine via Mobile application

MACHINE OVERVIEW

- [1] Led **Sen** status.
- [2] Led **Alarm** status.
- [3] Led **Stop** status.
- [4] Led **Run** status.
- [5] Led **Ink** status
- [6] USB connector. Use for **USB Wi-Fi module**.
- [7] RJ45 LAN connector. Use for **Print Online Data or Remote control**.
- [8] HDMI port (Not use)
- [9] Start/Stop button. **Start/Stop printer or use for reset default**.
- [10] Power supply connector.
- [11] I/O port. Connect to **Encoder, External sensor, Alarm beacon**.

INSTALLATION PROCEDURES

1

2

3

4

5

6

No	Item	Quantity
[1]	Machine	1
[2]	Clamps	3
[3]	Base clamp	1
[4]	Round bar short	1
[5]	Round bar long	3
[6]	Screws M8x20	8

MOUNTING BRACKETS

Please setup machine with minimum distance that you could. Closer distance for better printing quality. We are recommend from 1-3 mm.

Step 1

Select direction to mount machine on the conveyor or production line.

Step 2

Installing the base clamp to the side of the conveyor or production line.

Step 3

Installing the clamps to the round bar.

Step 4

Select the suitable bar length for each case.

Horizontal setup

This setup will be used to print on carton box, bottle, tray, pipe, etc...

Vertical setup

This setup will be used to print on paper, film, and other flat substrates.

NOTES: With default machine, we don't support this setup. You need buy more accessories (round bar and clamps).

Step a: Add more clamp to bracket.

Step b: Add one more vertical round bar.

NOTES:

Make sure the brackets are mounted firmly to avoid vibration and sway of the print head. This will affect the print quality.

GETTING STARTED

Install the machine on your conveyor according to the installation instructions. See the Quick Start Guide for more information.

- Set print direction and appropriate throw distance to obtain best print quality (1-3 mm).
- Insert ink cartridge.
- Plug the power cord into an appropriate power source to start up the machine.
- The printer need PE (Protective earthing conductor) connection before use.

EXTERNAL DEVICES CONNECTIONS

NOTES:

- Machine is able to operate with External Sensor, Encoder, Alarm at a time. Consult your supplier for further supports on the settings and connections.
- To connect machine with External Sensor, Encoder, Alarm, etc..., additional connector DB15 (male) will be required.

EXTERNAL SENSOR

Machine supports NPN, PNP and Push-pull sensor types.

- Connect sensor using power supply on machine **24VDC**.

NPN type Sensor

Active: 0V
Deactive: Free
Vcc: 12-24V

PNP type Sensor

Active: Vcc
Deactive: Free
Vcc: 12-24V

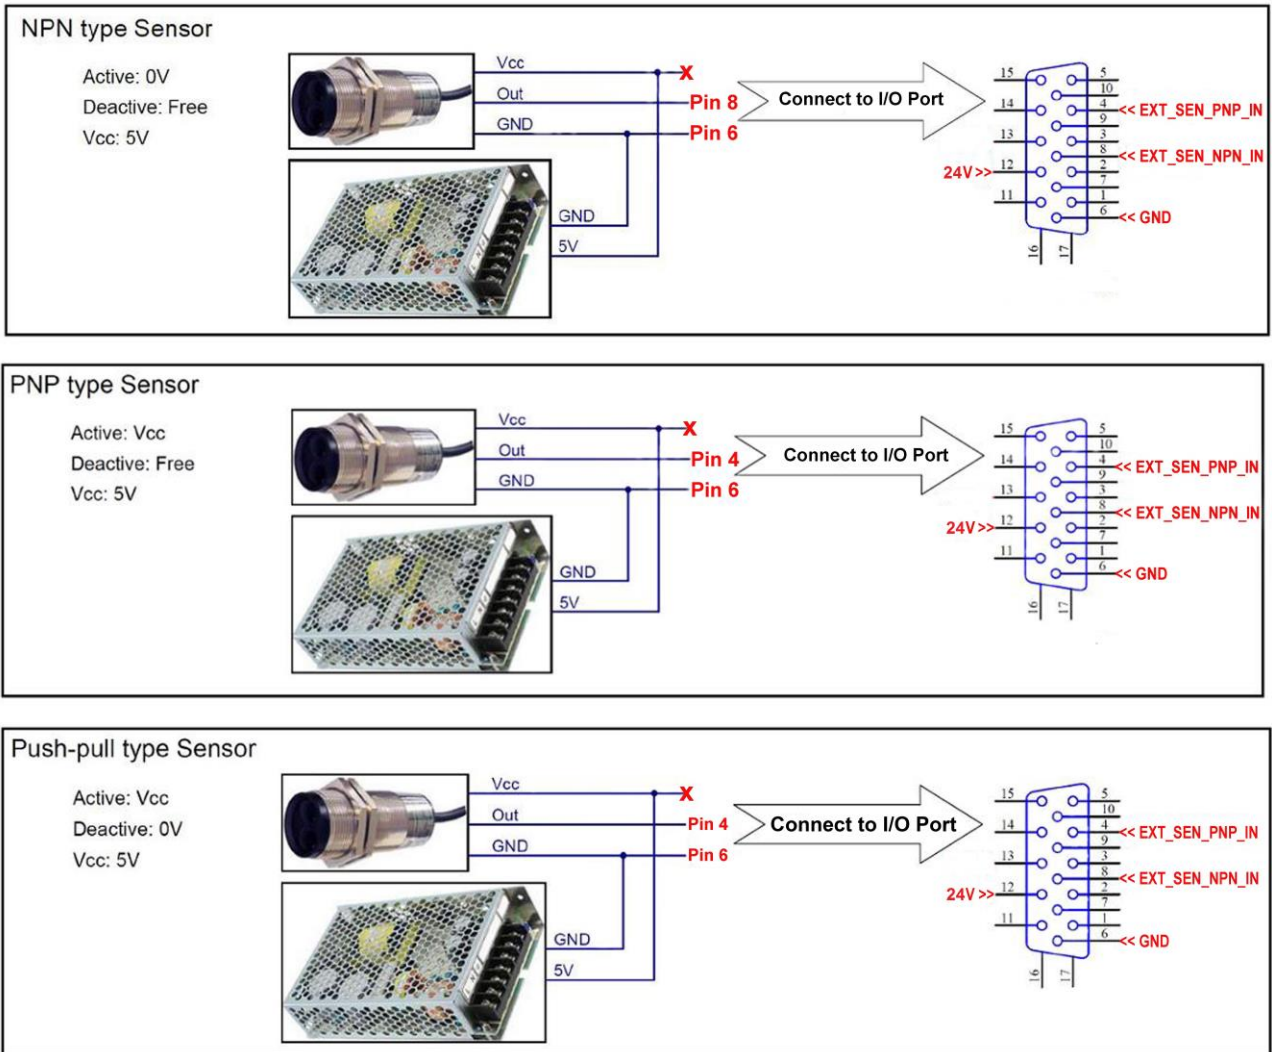

Push-pull type Sensor

Active: Vcc
Deactive: 0V
Vcc: 12-24V

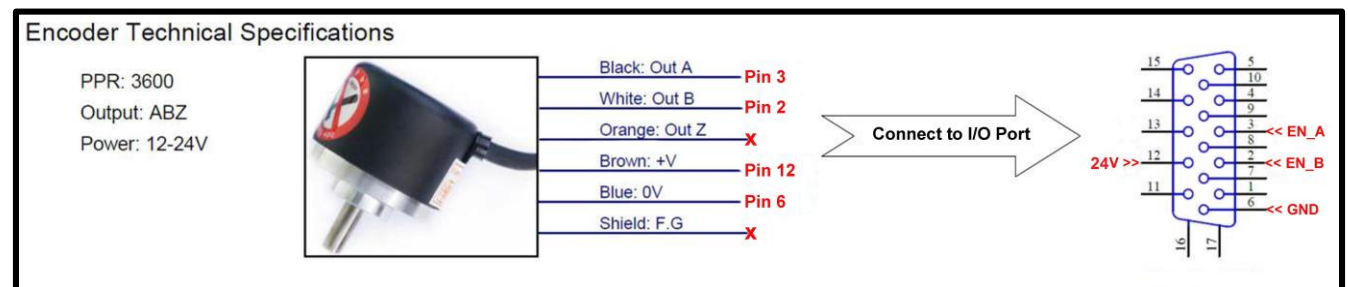

- Connect sensor to machine using external power supply. Below demonstration is for external power supply of **5VDC**.

ENCODER

An encoder is recommended to ensure the best print quality regardless the inconsistent speed of conveyor.

To calculate wheel diameter (**D**) depend on resolution (**R**) is:

$$D = R / (\pi \times 600) \text{ (inches).}$$

Example: Encoder has R = 3600 (PPR),

$$\Rightarrow D = 1.90985 \text{ inches} \sim 48.5 \text{ mm.}$$

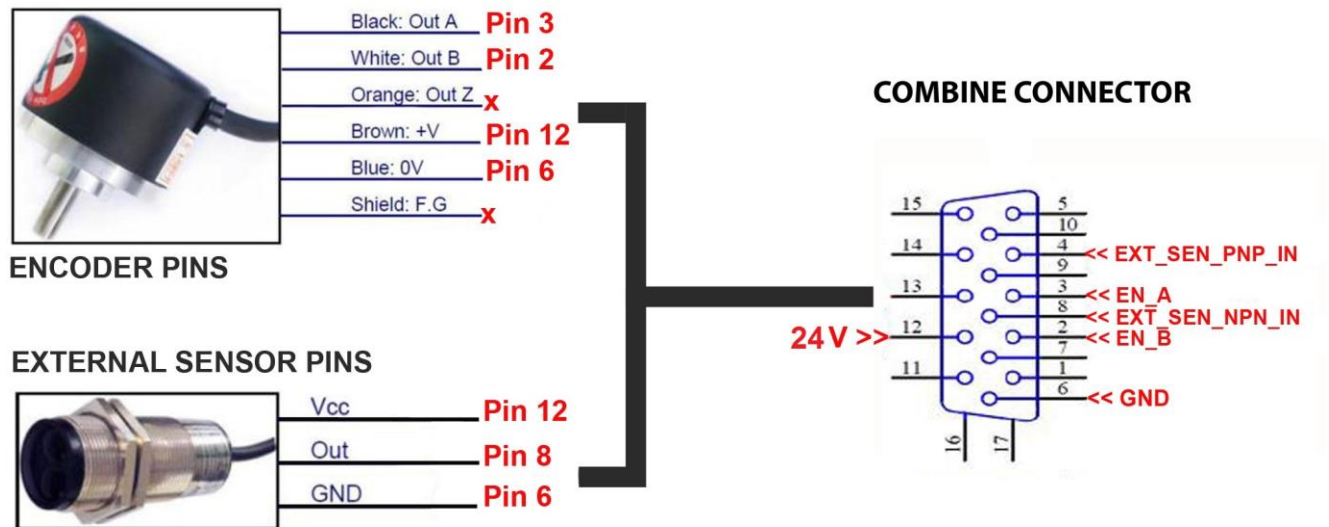

COMBINE EXTERNAL SENSOR AND ENCODER

In some case you need to use external sensor and encoder to get perfect printing quality. But the machine have one extended port only. Please do as following instruction to take external sensor and encoder work together with machine.

See picture for this situation.

See this picture for connection pins.

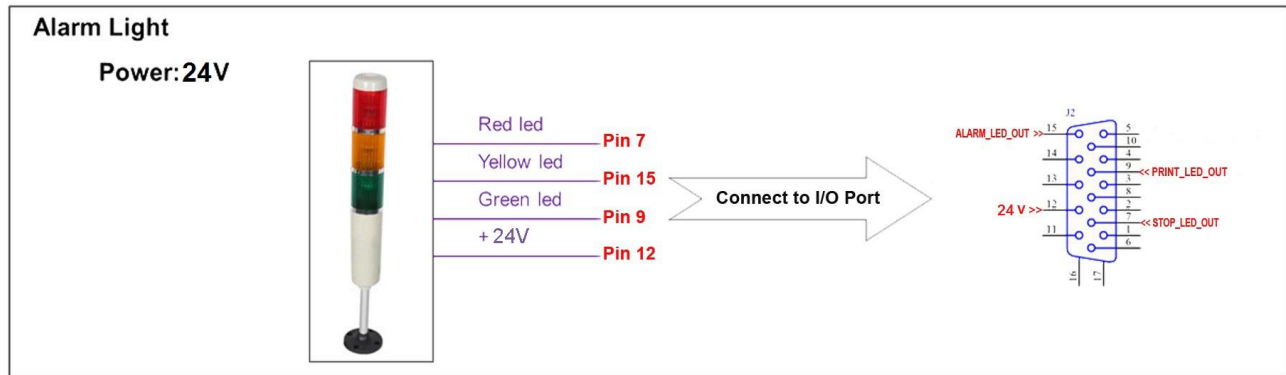

NOTES:

PIN12 (24V) use for both of Encoder and External sensor.

ALARM

Allow users to monitor operation of Machine from distance via the light signals from the Alarm.

INPUT AND OUTPUT

Input: To trigger some functions (reset counter ...). Accept NPN or dry contact.

Output: NPN signal. Active when some even occur (each print ...).

QUICK STARTUP

REQUIRED COMPONENTS

No.	Basic Components	With Smartphone	With PC Web browser	Optional
1	Machine	✓	✓	
2	Power supply	✓	✓	
3	Mounting brackets	✓	✓	
4	USB Wi-Fi Module	✓	✓

Setup machine

See Installation Procedures and Getting Started.

NOTES: The machine will function with Water based ink and Solvent based ink series from us only. Trying to use unapproved cartridges may damage the machine and void the warranty.

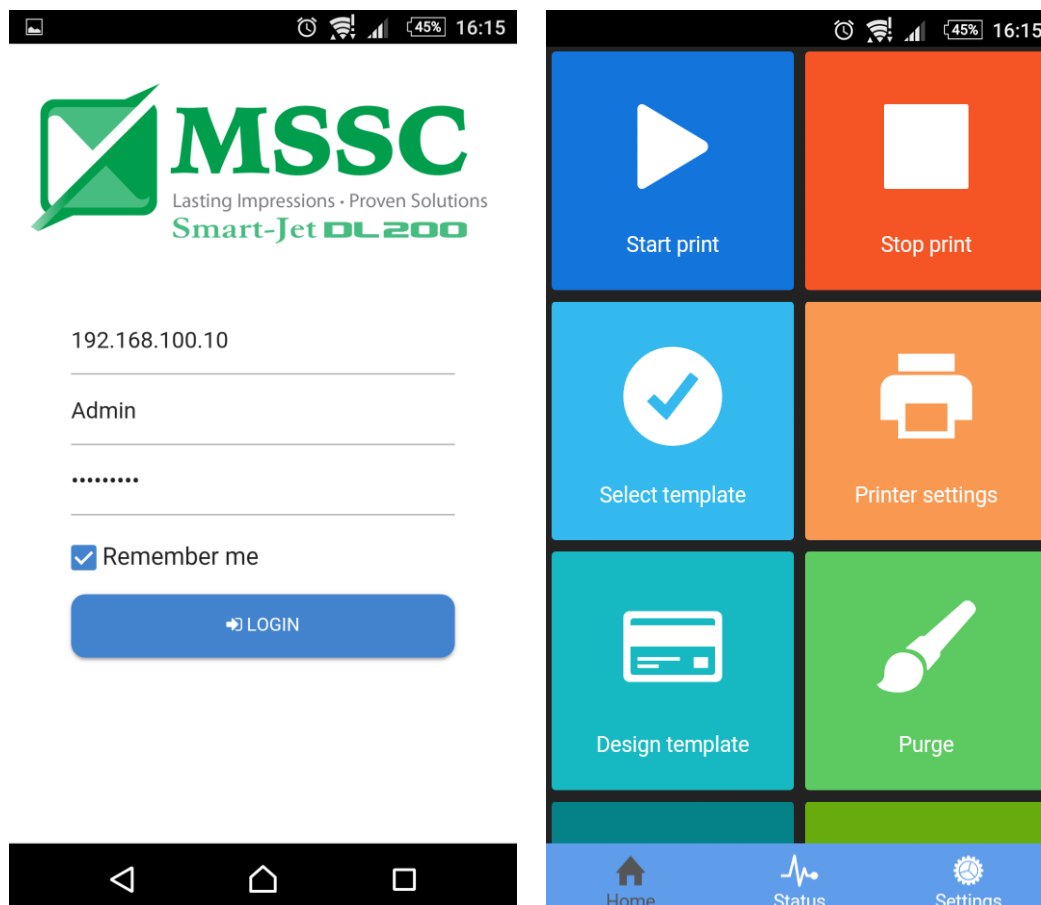

Login machine by Wi-Fi hotspot using USB Wi-Fi module.

- Insert the **USB Wi-Fi module to USB connector port.**
- Insert the Power supply.
- Power on the machine. The boot time to complete about 40 seconds.
- The Beep sound and Alarm beacon to confirm boot completed.
- By default for USB connector port is Wi-Fi Hotspot:
 - SSID: **DL200_XX**
 - Password: **dluoj@200 (Please change the password hotspot for security)**
- **Connect the Smartphone or PC to Wi-Fi hotspot.**
- **Login the machine by default username and password:**
 - **IP default: 192.168.100.10**
 - Username: **Admin** (password: **dl@admin**)
 - Username: **Operator** (password: **dl@operator**)
 - Username: **Viewer** (password: **dl@viewer**)
- **Please change the Admin's password for security.** Admin can add more user.

By PC Web Browser using Wi-Fi hotspot (Chrome, Firefox, Opera, Safari).

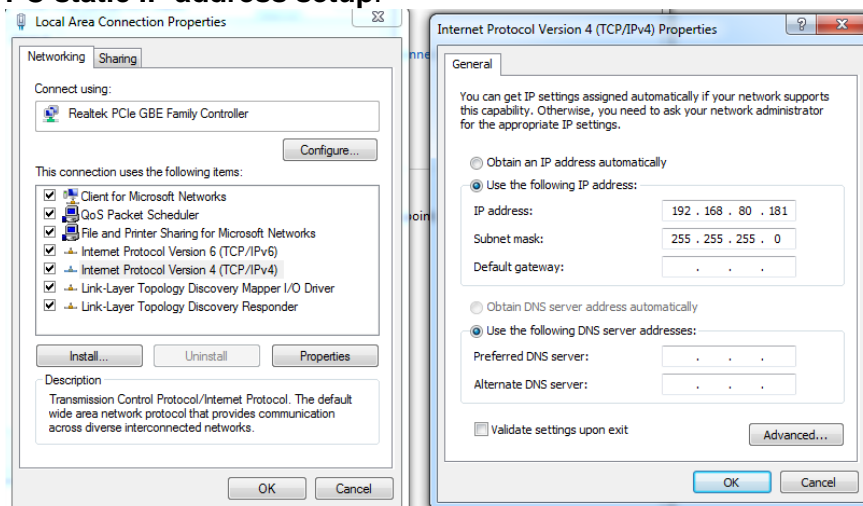

By Smartphone using the Android Application or iOS Application.

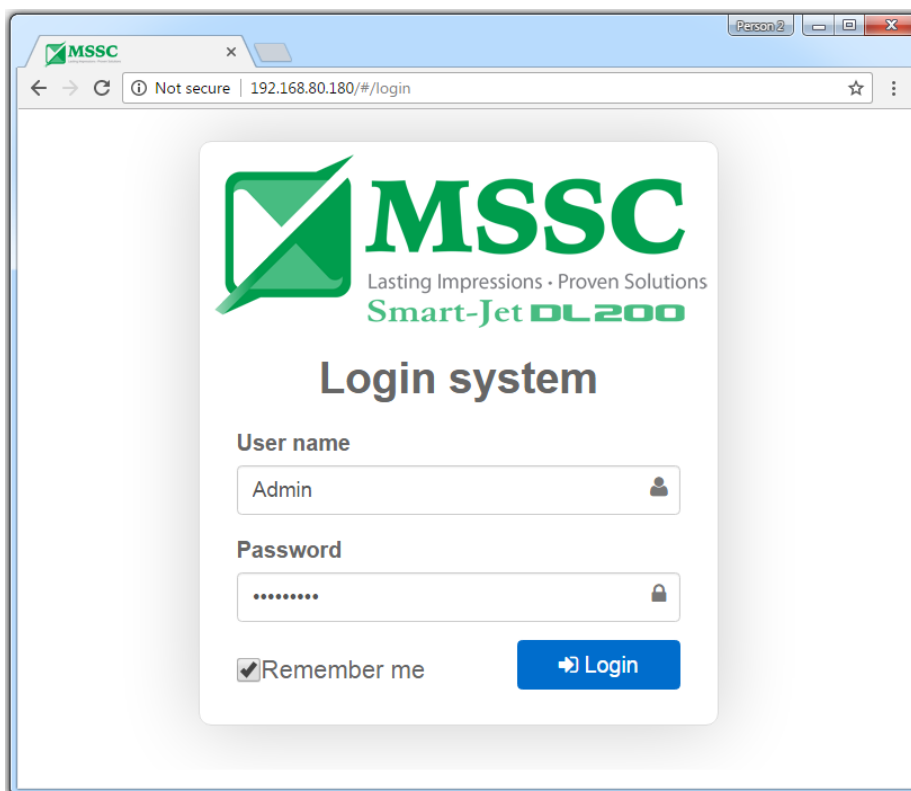

Login machine by PC Web browser using RJ45 LAN connector.

- **PC static IP address setup.**

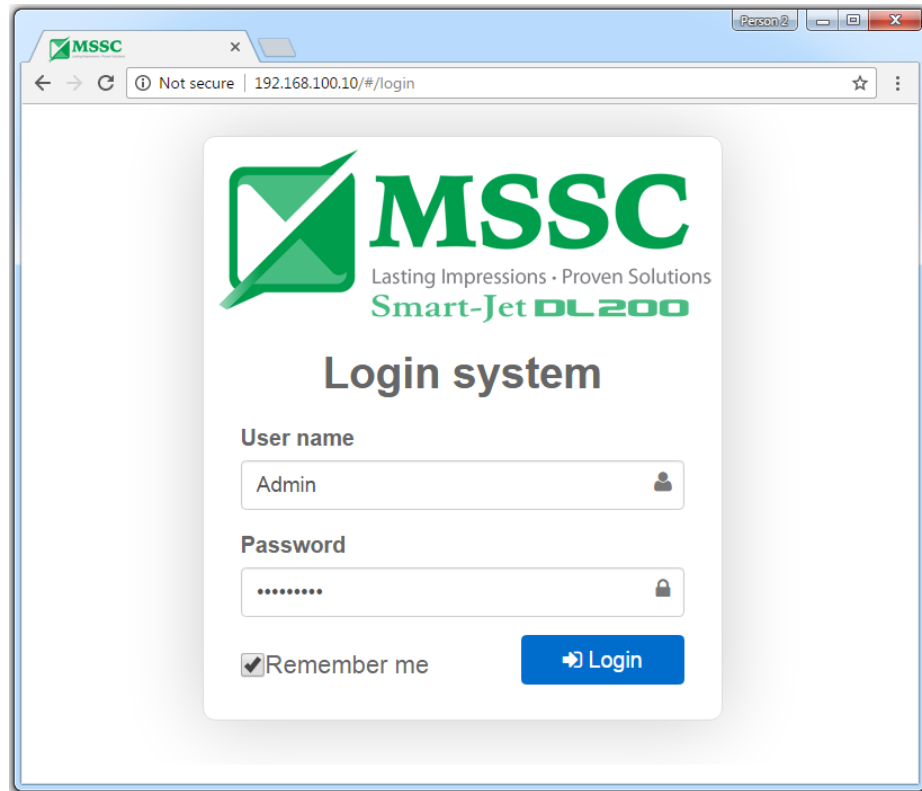

- Insert the Power supply.
- **Connect PC RJ45 gate to RJ45 LAN connector by cable.**
- Power on the machine. The boot time to complete about 40 seconds.
- **Login the machine by default username and password:**
 - IP default: **192.168.80.180**
 - User name: **Admin** (password: **dl@admin**)
 - User name: **Operator** (password: **dl@operator**)
 - User name: **Viewer** (password: **dl@viewer**)
- **Please change the Admin's password for security.** Admin can add more user.

Draw Counter

The screenshot shows the 'Draw Counter' interface. At the top, there's a blue header bar with 'Back', 'Design template', and 'Admin' options. Below this is a toolbar with icons for file operations and drawing. A ruler is visible at the top of the drawing area. The main drawing area shows a barcode with the value 'A-000001-B'. A 'Properties' dialog box is open, showing the 'Barcode' tab. The dialog has three tabs: 'Properties', 'Barcode', and 'Common'. The 'Barcode' tab is active, showing fields for 'Data type' (Number), 'Value' (1), 'Prefix' (A-), 'Step' (1), 'Min length' (6), 'Suffix' (-B), 'Repeat' (0), 'Quantity' (1), and 'Order print' (Increase). There are 'Save' and 'Close' buttons at the bottom right of the dialog.

Properties:

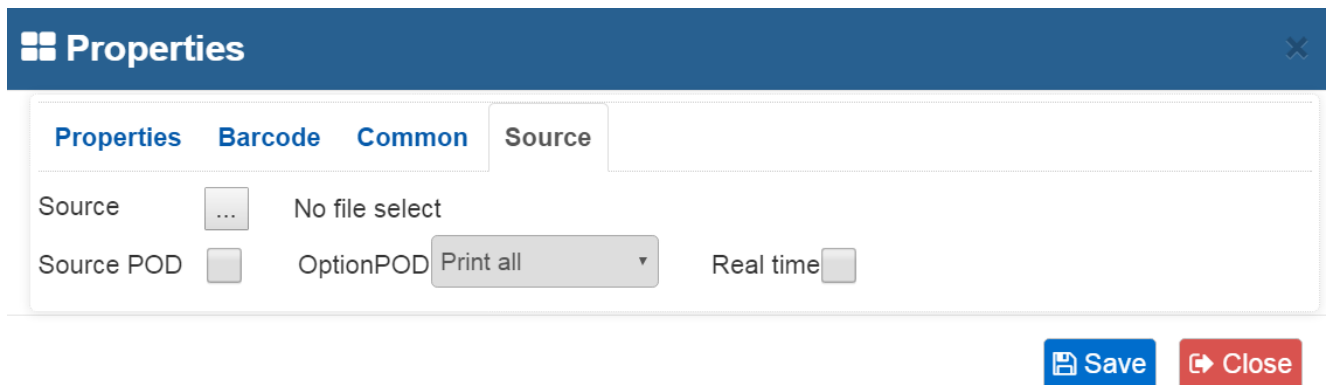

- **Data type:** Number or Alphanumeric
- **Step:** Set 1 (A-000001-B increase A-000002-B), set 2 (A-000001-B increase A-000003-B).
- **Repeat:** Counter repeat time. 1: (A-000001-B, A-000001-B → A-000002-B, A-000002-B,...).
- **Value:** Start value.
- **Min length:** Number length. Set 6 (000001).
- **Quantity:** Counter quantity.
- **Prefix:** Prefix characters.
- **Suffix:** Suffix characters.
- **Order print:** Increase or decrease.

Draw Variable

The screenshot shows the 'Draw Variable' interface. At the top, there's a blue header bar with 'Back', 'Design template', and 'Admin' options. Below this is a toolbar with icons for file operations and drawing. A ruler is visible at the top of the drawing area. The main drawing area shows a variable with the value '23/08/2017'. A 'Properties' dialog box is open, showing the 'Source' tab. The dialog has three tabs: 'Properties', 'Common', and 'Source'. The 'Source' tab is active, showing fields for 'Start point' (1), 'End point' (1), 'Date format' (dd/mm/yyyy), 'Value' (23/08/2017), 'Step value' (1), 'Add date' (0), 'Source' (Text), and 'Destination' (DateTime). There are 'Save' and 'Close' buttons at the bottom right of the dialog. The 'Destination' field has a red circle around it with a plus sign, and the 'Source' field has a red circle around it with a minus sign.

Properties:

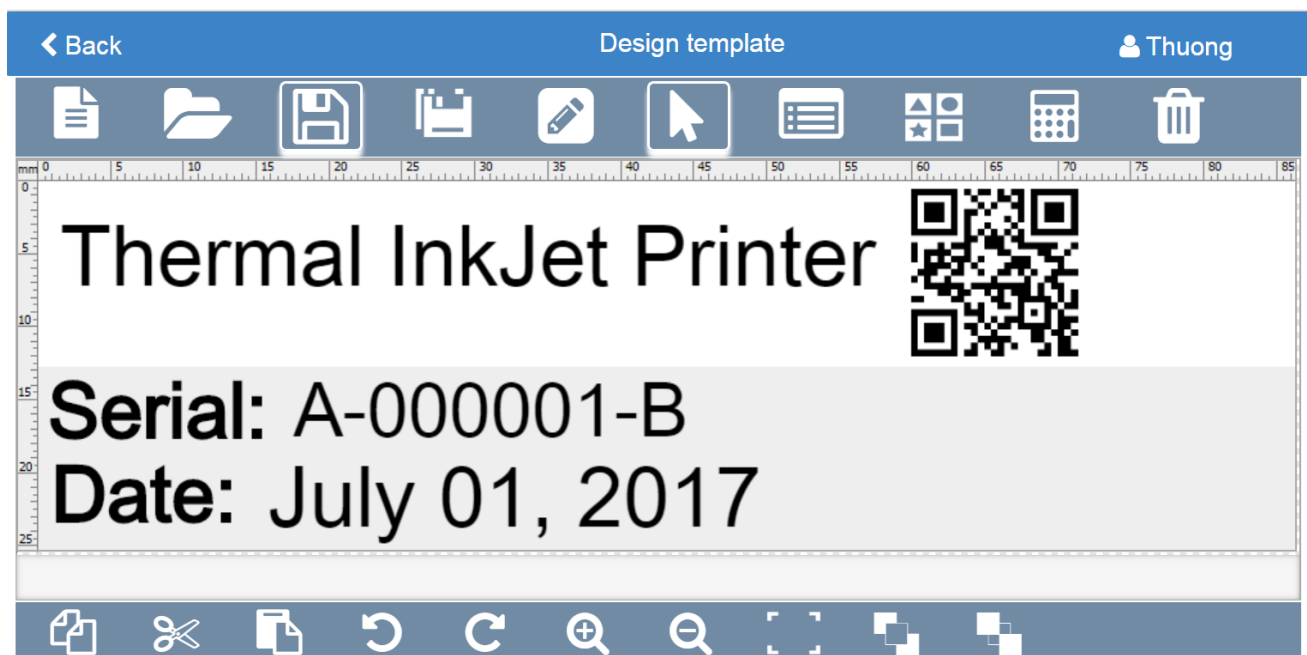

- **Start point:** Starting page number print
- **End point:** Ending page number print (0: Unlimited)
- **Date format:** Format date time
- **Value:** Add value of date time or text
- **Step value:** Step of page print (Only user for print database)
- **Add date:** Added to the current date
- **Source:** Type value (Text, Date time, object of database)
- **Destination:** Object of source be selected
- **[1]:** Moving objects back and forth between Source and Destination.
- **[2]:** Moving an object up and down in Destination
- **[3]:** Add or remove objects Field name (Only use for POD)

The image shows a 'Properties' dialog box with a dark blue header and a light blue body. It has four tabs: 'Properties', 'Barcode', 'Common', and 'Source'. The 'Source' tab is selected. Inside the 'Source' tab, there is a 'Source' field with a dropdown arrow and the text 'No file select'. Below it, there is a 'Source POD' checkbox, an 'OptionPOD' dropdown menu set to 'Print all', and a 'Real time' checkbox. At the bottom right, there are 'Save' and 'Close' buttons.

Source:

- **Source:** Path to file database
- **Source POD:** Tick if print POD (Print online data)
- **Option POD:** Print all, Print last, Print continuous last
- **Real time:** Tick if print real time

APPENDIX

INK CARTRIDGES MAINTERNANCE

Print head cleaning

As Machine is working, if the print quality is degraded, please check on the ink level in the cartridge:

- If the cartridge is out of ink, change the new cartridge.
- If the cartridge isn't out of ink, the degraded print quality may be caused by the ink-spray, dust, or paper fiber being collected and built up on the surface of the nozzles plate. To maintain the print quality of the cartridge follow these wiping and purging tips.

Wiping

[1]: Materials needed: a lint-free, soft cloth, and de-ionized water.

[2]: Moisten the cloth with de-ionized water. Tap water also works but de-ionized water is recommended since the tap water contains impurities that can damage the print head.

[3]: Wipe slowly across the long-axis with the cartridge facing down as shown.

[4]: There are two lines of ink on the moistened cloth after wiping.

Important notes

- To avoid scratching the orifice plate, do not apply excessive force or use a dry or abrasive cloth.
- To avoid clogging the nozzles, make certain that the lint free cloth and de-ionized water used do not have a high percentage of suspended particles.
- Do not shake the cartridge as ink pressure will damage the nozzles.

Purging

[1]: If the cartridge sits inactive and uncapped for a period of time, the ink may dry and form a viscous plug at the nozzles. The dried ink plug can cause misdirected drops and eventually block the nozzles. White streaks may be visible in the printed text or graphic. To fix this problem, purge the ink plug out of the nozzles. Printing alone may be inefficient in removing ink plugs from the nozzles.

[2]: Then wipe the cartridge with a moist, lint-free cloth to remove the excess ink on the surface of nozzle plate.

[3]: After that print a few lines of text or graphics at high resolution to utilize more nozzles and push more ink out.

[4]: Finally, check the printed image. If the print quality can't be recovered, repeat this procedure several times. If it still doesn't work, change the print cartridge.

The cartridge before [1] and after [2] cleaning:

INK CARTRIDGE STORAGE PROCEDURE

For short term storing (less than one day)

- Leave the cartridge in the machine, capped. Capping cartridge is always recommended to prevent the nozzles from drying out or becoming clogged due to ink's solvent evaporation or dusting.
- Wipe and/or purge the cartridge next time it is used until good print quality is achieved.

For long term storing (more than one day)

- Remove the cartridge from the machine
- Remember that all inkjet print cartridges produce a small amount of ink residue that may build up on the cartridge nozzles during printing. We need to wipe the cartridge to remove these ink residues from the nozzles plate.
- Tightly cap the print cartridge by sealing tape.
- Leave the cartridge uncapped and place it in an airtight container with moist, dust- free cloth or sponge to prevent cartridge's nozzles from drying out or becoming clogged. Close the container tightly.
- Wipe and/ or purge the print cartridge next time it is used until getting the good print quality is achieved.

System disposal

- Keep the print head connected to the ink reservoir when disposing of system.
- Place the entire system in a plastic bag to avoid ink leakage.

Important handling cautions

- The cartridge has to be stored in a nozzle-up position.
- Never squeeze the ink reservoir as this will push ink out of the print head.
- To avoid getting air in the print head, never shake, drop or hit the print head.
- To avoid getting air in the print head, never hold the print head more than 10 inches above the ink reservoir when removing the system for storage.
- To avoid ink leakage, never hold the print head below the reservoir.

UPDATE FIRMWARE AND SOFTWARE

NOTES:

- Be sure there is no power failure while firmware is being updated.
- All data and settings will be lost while updating new firmware.
- Cartridge should be removed from the machine to avoid failure.

Update firmware

- **Step 1:** Select “**Update**” function from tool menu.
