Porous MidSize Coders

(Shown with optional Reservoir Inking System Cover)

MARSH'S® new line of MidSize Coders establish a new standard of quality and versatility in contact coding systems. The unique modular design of these machines provides the flexibility to adapt the coder to a wider range of applications than any other system on the market. To provide unsurpassed durability, the frames and print drums on these coders are precision machined from solid aircraft grade aluminum thus eliminating the use of castings.

Porous Midsize Coders are offered in both 12" & 15" circumference print drum models for more accurate matching of the coder to the carton size. The long frame design and extended deflection capability add to the machine's versatility. When fitted with the optional Reservoir Inking System Cover assembly, the ink rolls are re-inked automatically during the printing operation.

Indexing models utilize a unique cam index mechanism which is ideally suited for carton sealing equipment or slow moving conveyors and short cartons. The print drums will index after being driven just over 50% of the print drum circumference.

12" CIRCUMFERENCE MODELS

15" CIRCUMFERENCE MODELS

(Models also available with 2" print width)

These coders can be ordered for either right-hand or left-hand mounting configuration and are easily field converted if mounting requirements change. The quick change print drum feature not only facilitates off-line code changes when spare drums are ordered but if the print applications change, the print drum size can be readily changed to accommodate the new requirements.

All porous models of the Midsize Coder come complete with a dry Microcell Ink Roll and print drums which accommodate MARSH'S® Ribtype die systems.
